IARC, WHO: Move Radio Frequency Radiation from Class 2b to Class 1

Why this is important to me

Stop downplaying the health effects and cancer risks from RF EMF radiation! Please move Radio Frequency (RF) electromagnetic fields (EMFs) from Class 2b "Possible Human Carcinogen" to Class 1, "Carcinogenic to Humans" now! There is enough cancer, illness and death around the world due to these emissions in addition to an overwhelming body of science showing cancer amongst other very serious health effects, all from this ubiquitously propagated but deadly RF radiation to warrant this increase in classification! Stop playing with the planet's health and life!! Move this radiation to Class 1 now!

"Due to the relationship with survival the classification of IARC is strengthened and RF-EMF should be regarded as human carcinogen requiring urgent revision of current exposure guidelines." Dr. Lennart Hardell, Swedish Oncologist, MD PhD, Orebro University Hospital, Orebro, Sweden and
